

Bomber

Bomber is a long cucumber for active and passive greenhouses. It is a strong, vigorous variety with a good disease package, especially powdery mildew. Fruit are long, uniform and of high quality. Bomber is an early hybrid with medium-long fruits, ideally suited for active greenhouses or under plastic in warm months. Medium strong plant with high yield. The fruits have an attractive dark-green colour. They are regular and unique shaped fruit with smooth neck and slightly ribbed

Technical data

Earliness	Medium Early
Plant	Medium strong vigour Medium Internodes Hardy plant
